

EDUCATION

- **BTech Electrical Engineering**, National Institute of Technology, Jaipur 2025.

EXPERIENCE

ICICI Bank (July 2025 – Present) | Data Engineer, Mumbai

- Worked with **IBM InfoSphere DataStage and Designer** to schedule and monitor automated ETL jobs, ensuring reliable batch processing and timely data availability across enterprise systems.
- Analyzed and resolved **UCIC (Unique Customer Identification Code) mismatches** by investigating MDM deduplication rules and API matching logic, improving customer identity accuracy across downstream applications.
- Built and enhanced **Azure ETL pipelines** using **Azure Data Factory and Azure Databricks** to ingest and transform source-system data, delivering analytics-ready datasets to business and risk teams.
- Implemented **PII and PCI data redaction** using **regular expressions** to identify and obscure sensitive fields across **on-premise Oracle and MySQL databases**, strengthening data security and compliance controls.

PROJECTS

Credit Default Risk Prediction

- Built a supervised credit default prediction model on customer financial and behavioural data, performing EDA and feature engineering such as income-to-loan and EMI-to-income ratios to capture repayment capacity better.
- Modelled non-linear risk patterns using an artificial neural network instead of linear models, improving separation between defaulters and non-defaulters.
- Evaluated model performance using ROC-AUC to address class imbalance and focus on risk ranking rather than raw accuracy while achieving ROC-AUC of **0.87** on test data.

Financial Text Summarization & Insight Generation (NLP + LLM)

- Analysed and implemented a text summarisation pipeline for financial reports using transformer-based models, achieving an **ROUGE-L score of 0.72**.
- Improved summary coherence through preprocessing and chunking strategies for long documents by implementing an RAG pipeline.
- Reduced average document length by **60%** while preserving key risk insights for stakeholder consumption.

Customer Spending & Risk Analytics

- Performed end-to-end customer spending analysis by querying transactional data from PostgreSQL and integrating results into Python workflows.
- Used advanced SQL constructs such as CTEs, window functions, and aggregations to identify trends, outliers, and high-risk customer segments.
- Translated analytical outputs into interpretable insights to support business and risk decision-making.

TECHNICAL SKILLS

- Programming language: Python, SQL, PySpark
- AI & ML: Pytorch, TensorFlow, RNN, LSTM, CNN, NLP
- Database & Analytics Tools: ETL (IBM DataStage), MDM, Azure data factory, Databricks.
- Data visualisation tools: Tableau, Power Bi
- Software: Visual Studio Code, GitHub Desktop, MS Office (Excel, Word, PowerPoint)
- Others: Dynatrace, Postman, Spark SQL, SQL Developer

LEADERSHIP SKILLS

- **Executive, Think India MNIT Club:** Led the planning and execution of large-scale events with **5,000+ attendees**, managing and coordinating a team of **20+ students** to ensure smooth operations and delivery.
- **Founder, Unicorn Club (2022):** Built and scaled a community of entrepreneurs, organizing and hosting **30+ talks** focused on practical business insights, collaboration, and knowledge sharing.
