

EDUCATION

- **BTech Electrical Engineering**, National Institute of Technology, Jaipur 2025.

EXPERIENCE

ICICI Bank (July 2025 – Present) | Data Engineer, Mumbai

- Worked with **IBM InfoSphere DataStage and Designer** to schedule and monitor automated ETL jobs, ensuring reliable batch processing and timely data availability across enterprise systems.
- Analyzed and resolved **UCIC (Unique Customer Identification Code) mismatches** by investigating MDM deduplication rules and API matching logic, improving customer identity accuracy across downstream applications.
- Built and enhanced **Azure ETL pipelines** using **Azure Data Factory and Azure Databricks** to ingest and transform source-system data, delivering analytics-ready datasets to business and risk teams.
- Implemented **PII and PCI data redaction** using **regular expressions** to identify sensitive fields across **on-premise Oracle and MySQL databases**, strengthening data security and compliance controls.

PROJECTS

LinkedIn Content Automation System

- Built backend automation using n8n as a workflow orchestration layer to manage content pipelines without custom service development.
- Designed workflows to fetch, process, and publish LinkedIn content via APIs, handling end-to-end execution.
- Used prompt-based generation within workflows to support content variation and consistency.

AI-Powered WhatsApp Automation System

- Deployed a WAHA instance on a Linux VM in Google Cloud Platform (GCP) to maintain an authenticated WhatsApp session.
- Set up n8n in a Docker container to handle backend logic and workflow orchestration.
- Designed n8n workflows to process incoming events, apply conditional logic, and trigger appropriate responses.

Automated Alpha Backtesting on WorldQuant BRAIN

- Built an AI-driven ingestion pipeline with Langchain bases RAG along with with regex + prompt-engineered LLM parsing to convert unstructured inputs into structured alpha formulas.
- Developed a scalable automation engine using Playwright with selector-based execution, session persistence, and retry handling for reliable backtesting.
- Implemented asynchronous workflows in Python with queue-based processing and SQL logging for parallel execution and experiment tracking.

TECHNICAL SKILLS

- Programming language: Python, SQL
- AI & ML: Pytorch, TensorFlow, LSTM, NLP, Langchain
- Database & Analytics Tools: ETL (IBM DataStage), MDM, Azure data factory, Databricks.
- Data visualisation tools: Tableau, Power Bi
- Software: Visual Studio Code, GitHub Desktop, MS Office (Excel, Word, PowerPoint), GCP
- Others: Dynatrace, Postman, Spark SQL, SQL Developer, n8n, Docker, Openclaw

LEADERSHIP SKILLS

- **Executive, Think India MNIT Club:** Led the planning and execution of large-scale events with **5,000+ attendees**, managing and coordinating a team of **20+ students** to ensure smooth operations and delivery.
- **Founder, Unicorn Club (2022):** Built and scaled a community of entrepreneurs, organizing and hosting **30+ talks** focused on practical business insights, collaboration, and knowledge sharing.
